

## ENVIRONMENTAL POLICY

The Organiser of Croatia Rally recognises its responsibility to manage the environmental impact of a large international sporting event and is committed to continuously improving environmental performance through responsible planning and operations.

Croatia Rally involves a wide network of stakeholders including organisers, public authorities, suppliers, sporting teams, sponsors, media representatives and spectators. Due to the scale and geographic dispersion of the event, activities may affect local communities and ecosystems. The Organiser therefore integrates environmental responsibility into all planning, operational and coordination processes and promotes shared accountability among all participants.

Environmental protection is embedded into event preparation, implementation and stakeholder cooperation.

### GUIDING PRINCIPLES

**Regulatory compliance** The event is organised in accordance with applicable national and European environmental legislation and recognised international motorsport standards.

**Impact prevention and mitigation** Environmental risks associated with rally operations are systematically identified, assessed and mitigated, particularly those related to air quality, soil protection, water management, biodiversity and local communities.

**Efficient resource management** Energy, water and materials are used responsibly and efficiently. Unnecessary consumption is reduced and environmentally preferable alternatives are prioritised whenever feasible.

**Waste prevention and circular management** Waste generation is minimised through prevention measures, reuse and recycling. Disposal is treated as a last option and conducted in accordance with environmental regulations.

**Climate responsibility** The Organiser works to measure the carbon footprint of the event and implements practical reduction measures while supporting recognised environmental compensation initiatives.

Technical realization

**Sustainable mobility** Participants and spectators are encouraged to use public transport, organised shuttle services and shared transport options in order to reduce traffic congestion and related emissions.

**Stakeholder engagement and awareness** Environmental responsibility is promoted among employees, contractors, teams, partners and spectators through communication, education and operational guidelines.

**Continuous improvement** Environmental performance is regularly reviewed and enhanced through evaluation of implemented measures and adoption of improved practices.

## OPERATIONAL ENVIRONMENTAL MEASURES

**Event management and operations** Digital documentation and communication tools are prioritised in order to minimise paper use. Energy consumption in operational zones and temporary facilities is reduced wherever possible. Vehicle washing is permitted only in designated areas equipped for controlled wastewater collection and treatment. During vehicle servicing, protective ground sheets are mandatory to prevent soil contamination.

**Waste management** Clearly marked multi-stream waste collection points are installed in the Service Park, Fan Zones and high-attendance areas. Single-use plastic catering utensils are eliminated and replaced with reusable or biodegradable alternatives. Waste collection bags are made available to spectators in order to support responsible disposal. Post-event environmental clean-up operations are conducted along rally stages and spectator areas.

**Transport and mobility** Public transport, shuttle systems and carpooling are promoted through event communication channels. Coordination with local authorities supports traffic management and reduction of transport-related environmental impact.

**Education and communication** Environmental guidelines are communicated to teams, suppliers and staff prior to and during the event. Environmental awareness messages are disseminated through media channels, digital platforms and spectator information materials.

## GOVERNANCE AND RESPONSIBILITY

Environmental management forms an integral part of event governance. Responsibilities are distributed across organisational units, contractors and partners to ensure consistent implementation of environmental standards.

The Organiser is committed to transparent communication of environmental objectives and to the responsible management of environmental impacts associated with the event.

Daniel Šaškin

President of the Organising Committee
